

7 Key Features of Fleet Management Software

Fleet management software and telematics are powerful digital toolboxes.

GPS Tracking

Real-time mapping with dynamic routing, that shows the location of every fleet vehicle.

Driver Monitoring

Monitor, collect and organize detailed data reports on drivers and field technicians driving behavior, skills and habits.

Fuel Efficiency Data Collection

Track fuel efficiency figures of every fleet vehicle on a day-to-day, week-to-week and month-to-month basis.

Automatic Maintenance Scheduling

Stay ahead of vehicle maintenance—including tire rotations, oil changes, brake checks, and multi-point inspections by setting up automatic maintenance notifications for every vehicle in your fleet.

Record-Keeping Capabilities

Store and organize your entire fleet's expense records in a centralized location. Digitally attach receipts, invoices, and detailed expense notes.

Compliance Management

Keep tabs on compliance by automatically tracking the electronic logging devices (ELDs) on every fleet vehicle, record drivers' Hours of Service (HoS), and maintain critical inspection paperwork.

Centralized Database

Consolidate your operational data into a single, intuitive database. From vehicle mileage and fuel efficiency to driver behavior and safety records can be synced and shared.

Improve Field Service Management

Increase Productivity

Increase Profits

EnSight+ is a new with customizable field service management software developed for managers, supervisors, and other industry professionals. Its extensive suite of functionalities was designed with a sense of maximum utility and minimum learning curve. EnSight+ is also highly flexible, with field service managers able to customize displays, workflows, reports, and data visualizations to best fit their operational objectives.
