

7 Key Features of Fleet Management Software

Fleet management software and telematics are powerful digital toolboxes.

1

GPS Tracking

Real-time mapping with dynamic routing, that shows the location of every fleet vehicle.

2

Driver Monitoring

Monitor, collect and organize detailed data reports on drivers and field technicians driving behavior, skills and habits.

3

Fuel Efficiency Data Collection

Track fuel efficiency figures of every fleet vehicle on a day-to-day, week-to-week and month-to-month basis.

4

Automatic Maintenance Scheduling

Stay ahead of vehicle maintenance—including tire rotations, oil changes, brake checks, and multi-point inspections by setting up automatic maintenance notifications for every vehicle in your fleet.

5

Record-Keeping Capabilities

Store and organize your entire fleet's expense records in a centralized location. Digitally attach receipts, invoices, and detailed expense notes.

6

Compliance Management

Keep tabs on compliance by automatically tracking the electric logging devices (ELDs) on every fleet vehicle, record drivers' Hours of Service (HoS), and maintain critical inspection paperwork.

7

Centralized Database

Consolidate your operational data into a single, intuitive database. From vehicle mileage and fuel efficiency to driver behavior and safety records can be synced and shared.

Improve Field Service Management

Increase Productivity

Increase Profits

EnSight+ is a new with customizable field service management software developed for managers, supervisors, and other industry professionals. Its extensive suite of functionalities was designed with a sense of maximum utility and minimum learning curve. EnSight+ is also highly flexible, with field service managers able to customize displays, workflows, reports, and data visualizations to best fit their operational objectives.
